

# Superstore Sales Performance Dashboard

A Business Intelligence project developed using **Power BI** to analyze and visualize retail sales data — transforming raw numbers into actionable insights for data-driven decision-making.

POWER BI

DATA ANALYTICS

BUSINESS INTELLIGENCE

*Prepared by Rutuja Sutar | Bachelor of Computer Applications (BCA)*

# Project Overview

The Superstore Sales Performance Dashboard provides a comprehensive view of **sales performance, customer behavior, regional contributions, product category performance, and customer segmentation**. Through interactive visualizations and KPI tracking, business stakeholders can quickly identify trends, opportunities, and areas requiring improvement.

## Data Analysis

Transforming raw sales records into meaningful business insights

## Interactive Dashboards

Filterable by Year, Category, Region, Segment, and State

## Strategic Reporting

Supporting data-driven decision-making for business stakeholders

# Tools & Technologies Used

This project leverages a modern data analytics stack to build, model, and visualize retail sales data end-to-end.

## Power BI

Used to create interactive dashboards and visualizations for business stakeholders.

## Microsoft Excel

Primary data source for sales records and customer information.

## Power Query

Used for data cleaning, transformation, and preparation before analysis.

## DAX

Data Analysis Expressions used to create measures, calculated columns, and KPIs.

## Data Modeling

Implemented relationships between tables to improve reporting accuracy and performance.

# Dashboard Objectives

The dashboard is designed to be user-friendly and interactive, allowing users to filter data by Year, Category, Region, Segment, and State. The primary objectives are:

- **Monitor overall business sales performance**
- **Track sales trends over time**
- **Analyze customer purchasing behavior**
- **Compare regional sales performance**
- **Evaluate product category contributions**
- **Identify top-performing states and customers**
- **Support strategic business decision-making**

# Key Performance Indicators

The dashboard displays four key business metrics providing an instant overview of overall business performance, helping management evaluate growth and profitability.

**\$2.26M**

**Total Sales**

Generated through 4,922 customer orders

**4,922**

**Total Orders**

Customer orders processed across all regions

**793**

**Total Customers**

Unique customers contributing to revenue

**\$459**

**Avg. Order Value**

Indicating strong customer purchasing activity

# Sales Trend & Category Analysis

## Sales Trend (2015–2018)

The Sales Trend chart illustrates monthly sales performance from 2015 to 2018. Sales show a positive growth trend over time, with several peak sales periods exceeding \$100K. Temporary declines are followed by strong recoveries, and overall business performance improved significantly by 2018. The upward trend indicates successful market performance and increasing customer demand. Seasonal fluctuations suggest opportunities for targeted promotional campaigns during slower periods.

## Sales by Category

Revenue is distributed relatively evenly across categories. Technology generated the highest sales contribution, while Furniture and Office Supplies showed similar performance levels.

Technology products represent the strongest revenue driver and should remain a strategic focus for future marketing and inventory planning.

# Regional & Segment Performance

## Sales by Region

West Region achieved the highest sales, with East Region following closely behind. South Region recorded the lowest sales contribution. The company should investigate factors contributing to the success of the West Region and apply similar strategies in underperforming regions.

## Sales by Customer Segment

Consumer customers generated more than half of total sales. Corporate customers contributed a substantial share, while Home Office customers represented the smallest segment. Marketing efforts should continue focusing on the Consumer segment while developing strategies to increase engagement within the Home Office segment.

# Top Performing States & Customers

## Top 5 States by Sales

California emerged as the highest-performing state by a considerable margin. Understanding customer preferences and market conditions in California could help replicate success across other regions.

## Top Customers by Sales

The dashboard identifies high-value customers contributing significantly to business revenue. Maintaining strong relationships with top customers through loyalty programs and personalized marketing can improve customer retention and long-term profitability.

# Recommendations

Based on the dashboard analysis, the following recommendations are proposed:

## Regional Growth Strategy

Increase marketing efforts and promotional activities in South and Central regions to improve sales performance.

## Product Strategy

Continue investing in Technology products, as they contribute the highest percentage of sales.

## Customer Retention

Develop customer loyalty programs for top customers to encourage repeat purchases.

## Customer Segmentation

Create targeted campaigns for Home Office customers to increase their contribution.

## Seasonal Marketing

Use historical sales trends to launch promotional campaigns during lower-performing periods.

# Conclusion

The Superstore Sales Performance Dashboard successfully converts raw sales data into actionable business insights through interactive visualizations and KPI monitoring. The analysis revealed that the **West Region, Technology Category, Consumer Segment, and California State** are the primary contributors to overall revenue. Additionally, sales trends indicate steady business growth and opportunities for further expansion.

## West Region

Highest regional sales contributor at \$710.22K

## Technology

Top category at 36.59% of total sales

## Consumer Segment

Largest segment at 50.76% of revenue

## California

Leading state with \$446K in sales

This project demonstrates proficiency in **Power BI, Data Visualization, DAX, Data Modeling, and Business Intelligence reporting**. The dashboard provides valuable insights that can support strategic planning, operational improvements, and data-driven decision-making within an organization.
